BMW M43 - Wikipedia

As mentioned above, the engine BMW 318 E36 M40 1.8 liters (marking M40B18) was developed in 1987 to change outdated motor M10 3 series BMW E30. Two years later (in 1989), the modification was released with a smaller size M40 1.6 liters. M40 was widely used to equip first models BMW E30, E36, Z3. Later it was replaced by m43 (m42) engine.

Other than it's cam belt the M40 was a lower maintenance engine. The M43 went back to using a chain, hurray! BMW sighted the main reason as being higher engine bay temperatures shortening belt life. Cars with lower front were getting less cooling air and catalytic converters generated a lot of heat.

The BMW M40 is an inline-four SOHC piston engine which replaced the M10 and was produced from 1987–1995. The M40 is a water-cooled four-cylinder gasoline engine with a crankcase made of gray cast iron .

M40 Bmw Engine

The BMW M40 is an SOHC four-cylinder petrol engine which was produced from 1987–1994. It served as BMW's base model four-cylinder engine and was produced alongside the higher performance BMW

M42 DOHC four-cylinder engine from 1989 onwards.

BMW M40 - Wikipedia

The M40-series started in 1987 with the production of 1.8-liter four-cylinder engine M40B18. M40 engines came to replace the old M10-series, which was very successful and common for BMW models in those days. A year later, the manufacturer released the smaller version - 1.6-liter M40B16 engine. The engine is quite traditional and straightforward.

BMW M40B18 Engine specs, problems, reliability, oil, 318i ...

BMW M40B16 Engine Review The manufacturer started production of the 1.6-liter engine of the M40 series (the full name M40B16) in 1988. In the design of this small engine was laid the M40B18 engine, which has 1.8-liter displacement and longer stroke. This engine has the cast iron cylinder block, durable and reliable.
