The Glasgow Coma Scale (GCS) uses exam findings to quantify level of consciousness following TBI, with 3 being the worst, defined as deep coma or death, and 15 being the best, a fully awake person. In a study by Fearnside et al., out of 315 patients with severe TBI, 65% with initial GCS of 3 died [6].

Other Pertinent Studies: Transthoracic Echocardiogram: no pericardial effusion. Because the weapon can be aimed at any direction (medially, superiorly, inferiorly), the heart can be potentially injured. A pericardial tamponade is lethal unless discovered and treated quickly. Blood Work Ordered: Type and screen; Coagulation panel; Complete blood count (CBC)
