'I am invisible, understand, simply because people refuse to see me.' Defeated and embittered by a country which treats him as a non-being, the 'invisible man' retreats into an underground cell, where he smokes, drinks, listens to jazz and recounts his search for identity in white society: as an optimistic student in the Deep South, in the north with the black activist group the Brotherhood, and in the Harlem race riots. And explains how he came to be living underground . . . 'An American classic . . . one of the most original voices of Black America.' The Times

Reveals what individuals can gain from difficult times in their lives, detailing the lessons the author has learned and the positive outcomes that can occur in such situations as failure, divorce, widowhood, and illness.

To metaphorize the world as a theatre has been a common procedure since antiquity, but the use of this trope became particularly prominent and pregnant in early modern times, especially in England. Old and new applications of the "theatrum mundi" topos pervaded discourses, often allegorizing the deceitfulness and impermanence of this world as well as the futility of earthly strife. It was frequently woven into arguments against worldly amusements such as the stage: Commercial theatre was declared an undesirable competitor of God's well-ordered world drama. Early modern dramatists often reacted to this development by appropriating the metaphor, and in an ingenious twist, some playwrights even appropriated its anti-theatrical impetus: Early modern theatre seemed to discover a denial of its own theatricality at its very core. Drama was found to succeed best when it staged itself as a great unmasking. To investigate the reasons and effects of these developments, the anthology examines the metaphorical uses of theatre in plays, pamphlets, epics, treatises, legal proclamations and other sources.

An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Highlighting the changing landscape of Chinese urban state schools under the pressure of recruiting a tremendous number of migrant children, this book examines the quality of state educational provisions from demographic, institutional, familial and cultural angles. Rooted in rich qualitative data from five Chinese metropolitan cities, it identifies the demographic changes in many state schools of becoming 'migrant majority' and the institutional reformation of 'interim quasi-state' schools under a low cost and inferior schooling approach. This book also digs into the 'black box' of cultural reproduction in school and family processes, revealing both a gloomy side of many migrant children's academic underachievement as a result of troubled home-school relations and a bright side that social inclusion of migrant children in state school promotes their adaptation to urban life. The author concludes that migrant children's experiences in state (and

quasi-state) schools turn them into a generation of 'new urban working-class'. The monograph will be of interest to scholars, students, practitioners and policymakers who want to better understand educational equality for migrants and other marginalised groups.

In *Don't Call It Sprawl*, the current policy debate over urban sprawl is put into a broader analytical and historical context. The book informs people about the causes and implications of the changing metropolitan structure rather than trying to persuade them to adopt a panacea to all perceived problems. Bogart explains modern economic ideas about the structure of metropolitan areas to people interested in understanding and influencing the pattern of growth in their city. Much of the debate about sprawl has been driven by a fundamental lack of understanding of the structure, functioning, and evolution of modern metropolitan areas. The book analyzes ways in which suburbs and cities (trading places) trade goods and services with each other. This approach helps us better understand commuting decisions, housing location, business location, and the impact of public policy in such areas as downtown redevelopment and public school reform.
